

DONOR AND DONATION DATA ANALYSIS USING SQL

Prepared By:

Ishicheli Faith

Role: Data Analyst

Tools: PostgreSQL | pgAdmin 4 | SQL

Date: June 2026

Executive Summary

Business problem

Understand donor behavior and identify opportunities to improve fundraising performance.

Key findings

- Total donation reached 249,085.
- Male donors contributed more overall than female donors.
- California generated the highest donation revenue.
- Research & Development professionals recorded the highest average donation.

Primary Recommendation

Focus fundraising efforts on high-performing donor segments and locations.

Business Context & Approach

Business Context

Nonprofit organizations rely on donor contributions to support operations and growth.

Project Objective

Identify donation patterns and high-value donor segments.

Approach

- ☐ *Data Exploration*
- ☐ *Data Quality Assessment*
- ☐ *Data Cleaning*
- ☐ *Business Analysis*
- ☐ *Advanced Analysis*

Key Finding #1

Male Donors Generated More Revenue

Gender	Donors	Total Donation
Male	492	127,628
Female	508	121,457

Male donors contributed a higher total donation amount despite being fewer in number.

Key Finding #2

California is the Strongest Fundraising Market

State	Total Donation
California	30,264
Texas	24,097
Florida	20,562

California, Texas, and Florida generated the largest share of donations and should be prioritized in future fundraising campaigns.

Recommendations

1. Target donors in California, Texas, and Florida

Expected Impact

Increase fundraising revenue by focusing on the strongest markets.

2. Focus donor engagement on Research & Development, Legal, and Human Resources professionals.

Expected Impact

Higher average donation values.

3. Develop re-engagement campaigns for inactive donors.

Expected Impact

Increase participation from donors classified as “Never” donors.

Appendix / Q&A

Additional Statistics
